

Sustainable Supply Chain Practices in Regional Manufacturing

Author: Maryam Kazem Hatem

Specialization: Business Administration

Publication Year: 2025

Abstract

This paper examines the adoption of sustainable supply chain practices among regional manufacturing firms, focusing on waste reduction, supplier accountability, and energy-efficient logistics. The study offers a practical maturity model to help organizations transition toward environmentally responsible operations.

Introduction

This is a sample placeholder document representing the full research paper. The complete study includes a literature review, methodology, data analysis, discussion of findings, and conclusion sections, available in the final published version.
